# Attestation letter

| | |
|---|---|
| Customer | Hacktron |
| Application | DamnVulnerableRemixApp |
| Test type | White box pentest |
| Engagement | Oct 19, 2026 to Oct 23, 2026 |
| Retested | Nov 2, 2026 |
| Issued | Nov 3, 2026 |

To whom it may concern.

Hacktron conducted a white box pentest of the DamnVulnerableRemixApp application to assess its risk posture and identify security issues that could negatively affect Hacktron's data, systems, or reputation. The scope of the assessment covered the maekuss/DamnVulnerableRemixApp source code on the main branch and the deployed application at https://expenseflow.demo.example, including account recovery, role enforcement, expense authorization and receipt handling. The pentest was conducted between Oct 19, 2026 and Oct 23, 2026.

This pentest was an assessment of the security of the application's functionality, business logic, and vulnerabilities, such as those cataloged in the Open Web Application Security Project (OWASP) Top 10 and the OWASP Top 10 for Large Language Model Applications. The assessment also included a review of security controls and requirements listed in the OWASP Application Security Verification Standard (ASVS) and the OWASP Artificial Intelligence Security Verification Standard (AISVS).

As the pentesting team identified vulnerabilities, they reported all of these issues to Hacktron for remediation.

Hacktron performed a retest on Nov 2, 2026 and verified that the reported vulnerabilities had been remediated.

Sincerely,

Zayne Zhang
